It was brillig, and the slithy toves
Did gyre and gimble in the wabe;
All mimsy were the borogoves,
And the mome raths outgrabe.
"Beware the Jabberwock, my son,
The jaws that bite, the claws that cat
Beware the Jubjub bird,
and shun the frumious Bandersnitch!"
He took his vorpal sword in hand:
Long time that manxome foe he sought.

Addendum to the

APPLE WRITER MANUAL

APPLE WRITER 1.1 AND DOS 3.3

The original version of Apple Writer uses "13 sector format"--one way in which data can be arranged on the diskette. Apple Writer 1.1 uses 16 sector format, which is a different arrangement of the data on the diskette. Many Apple II products now use 16 sector format, including DOS 3.3 and the 1.1 version of Apple Writer. If your Apple is set up to use 16 sector format, you can use Apple Writer 1.1 on it without making any changes at all to the hardware or using a special diskette.

If your Apple isn't set up for 16 sector, you'll have to do that by purchasing DOS 3.3 (Apple product #A2DØØ23) from your dealer. This product contains everything you'll need to convert your Apple to 16 sector, including new diskettes containing a program you'll need with the new version of Apple Writer.

USING APPLE WRITER WITH ORIGINAL APPLE WRITER TEXT FILES

If you have used the original version of Apple Writer and have text files that were created with that version, you can now transfer those files so they can be used with Apple Writer 1.1.

To transfer your text files, you need the System Master diskette that you received when you purchased DOS 3.3. The DOS 3.3 System Master diskette contains the program MUFFIN which transfers and converts the data. See the DOS manual, which you also received with DOS 3.3, for a description of the procedure for using MUFFIN.
